This book presents high-quality, original
contributions (both theoretical and
experimental) on software engineering, cloud
computing, computer networks & internet
technologies, artificial intelligence,
information security, and database and
distributed computing. It gathers papers
presented at ICRIC 2019, the 2nd
International Conference on Recent
Innovations in Computing, which was held in
Jammu, India, in March 2019. This conference
series represents a targeted response to the
growing need for research that reports on and
assesses the practical implications of IoT

This accessible text provides a lively introduction to the essential skills of creative problem solving. Using extensive case-studies and examples from a range of business situations, it explores various problem-solving theories and techniques, illustrating how these can be used to solve a range of management problems. Thoroughly revised and redesigned, this new edition retains the accessible and imaginative approach to problem-solving skills of the first edition. Contents include: * blocks to creativity and how to overcome them * key techniques including lateral thinking, morphological analysis and synectics * computer-assisted problem solving * increased coverage of group problem-solving techniques and paradigm shift. As creativity is increasingly recognized as a key skill for successful managers, this book will be welcomed as a comprehensive introduction for students and practising managers alike.

This updated and revised edition outlines strategies and models for how to use technology and knowledge to improve performance, create jobs and increase income.

It shows what skills will be required to produce, sell and manage performance over time, and how manual jobs can contribute to reduce the consumption of non-renewable resources.

Chemoinformatics is equipped to impact our life in a big way mainly in the fields of chemical, medical and material sciences. This book is a product of several years of experience and passion for the subject written in a simple lucid style to attract the interest of the student community who wish to master chemoinformatics as a career. The topics chosen cover the entire spectrum of chemoinformatics activities (methods, data and tools). The algorithms, open source databases, tutorials supporting theory using standard datasets, guidelines, questions and do it yourself exercises will make it valuable to the academic research community. At the same time every chapter devotes a section on development of new software tools relevant for the growing pharmaceutical, fine chemicals and life sciences industry. The book is intended to assist beginners to hone their skills and also constitute an interesting reading for the experts.

Workplace safety and environmental sustainability can be promoted by agreed standards, certification and labelling. This publication contains 22 case studies on the impact of standards and certification programmes for cash crops in developing countries, including organic agriculture, fair-trade labelling, "Social Accountability 8000", the Rainforest Alliance Sustainable Agriculture Programme, the Ethical Trading Initiative, ISO-14001 and EurepGap. It examines the origins, scope and certification systems of these initiatives, as well as stakeholder involvement, the standard-setting process, verification methods, the relationship with the World Trade Organization agreements and the potential role of governments.

Programming Language Concepts uses a functional programming language (F#) as the metalanguage in which to present all concepts and examples, and thus has an operational flavour, enabling practical experiments and exercises. It includes basic concepts such as abstract syntax, interpretation, stack machines, compilation, type checking, and garbage collection techniques, as well as the more advanced topics on polymorphic types, type inference using unification, co- and contravariant types, continuations, and backwards code generation with on-the-fly

peephole optimization. Programming Language Concepts covers practical construction of lexers and parsers, but not regular expressions, automata and grammars, which are well covered elsewhere. It throws light on the design and technology of Java and C# to strengthen students' understanding of these widely used languages. The examples present several interpreters and compilers for toy languages, including a compiler for a small but usable subset of C, several abstract machines, a garbage collector, and ML-style polymorphic type inference. Each chapter has exercises based on such examples.
