One of science's great unsung heroes, Nikola Tesla (1856-1943) was a prophet of the electronic age. His research laid much of the groundwork for modern electrical and communication systems, and his impressive accomplishments include development of the alternating-current electrical system, radio, the Tesla coil transformer, wireless transmission, and fluorescent lighting. Yet his name and work are only dimly recognized today: Tesla's research was so groundbreaking that many of his contemporaries failed to understand it, and other scientists are unjustly credited for his innovations. The visionary scientist speaks for himself in this volume, originally published in 1919 as a six-part series in Electrical Experimenter magazine. Tesla recounts his boyhood in Croatia, his schooling and work in Europe, his collaboration with Thomas Edison, and his subsequent research. This edition includes the essay "The Problem of Increasing Human Energy: With Special Reference to the Harnessing of the Sun's Energy," which anticipates latter-day advances in environmental technology. Written with wit and lan, this memoir offers fascinating insights into one of the great minds of modern science.

The book covers a wide range of advances in such broad fields as hydraulic factures, normal faults, overthrusts, ductile shear zones, rock fabrics, folds, superposed folds and basement structures.

Why buy a book you can download for free? We print the paperback book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the bound paperback from Amazon.com This book includes original commentary which is copyright material. As cities grow, land becomes scarcer and dearer. In Malaysia, terrace houses in the cities and suburbs are already out of the financial reach of most people. They must make do with high-rise housing, but even these are increasingly expensive. With increasing prosperity, car-ownership spirals, congesting main arteries, dominating neighbourhood streets and discouraging other activities - walking, cycling, children ' s outdoor play, and casual social interaction – making low-rise neighbourhoods less vibrant. As for high-rise housing, it has always been associated with social ills. Is this trend of homes becoming less affordable and neighbourhoods becoming more sterile inevitable? Are there any design alternatives to terrace houses and high-rise blocks that can make housing socially better and affordable? This book offers the optimistic prospect that courtyard homes - with private and shared gardens in front of them – can create an environment is that more community-friendly. That these courtyard neighbourhoods can be created in both low-rise as well as high-rise situations. That these houses and neighbourhoods can be designed in a cost-efficient way so that these courtyard homes can be affordable to as many as possible. Pie in the sky? Not quite... Several affordable low-rise projects have already been completed or are in the pipeline. We are also working to commercialize our R&D that extend the ideas first developed for low-rise to various types of high-rise housing projects.
